## **QUIZ # 6**

Objective:	Demonstrate javascripting with jQuery
------------	---------------------------------------

## **Specifications:**

Obtain a copy of the quiz06.html file included with these specifications. Add jQuery to this page to create the following two behaviors:

1. If the user clicks on the button, both form fields, as well as their labels, should disappear from view (you may choose from any of the various jQuery techniques for making something disappear)

For example: before, then after clicking the button:

2. When the page first loads, ensure the mouse cursor is already in the firstname field, ready for the user to simply start typing without having to first select it. Research the jQuery focus() event to determine how to do this: <a href="http://api.jquery.com/focus/">http://api.jquery.com/focus/</a>

## **Submission:**

Use a compression utility such as Winzip or Winrar to compress all related quiz files into a single file named *lastname\_firstname\_quiz06.zip* using your last and first names.

Email your instructor the .zip file as an attachment:

To: jeffrey\_parker@bcit.ca Subject: comp1950 quiz 6 Body: your full name Attachment: zip file
